## Roads to Regionalism: Genesis, Design, and Effects of Regional Organizations (The International Political Economy of New Regionalisms Series) By Tanja A. Börzel, Lukas Goltermann, Kai Striebinger

Over the past few decades states all around the globe have intensified institutionalized cooperation at the regional level. To deepen our understanding of state-led regionalism, the authors use an analytical framework comprising four main strands. First, they describe and explain the genesis and growth of regional organizations. Second, they account for institutional design, looking at important similarities and differences. Third, they examine the interaction between organizations and member states in an attempt to reveal factors that shape the level of commitment to and compliance with regional initiatives. Finally, they consider the impact of regional organizations on their member states. They conclude by providing a foundation for future research on the dynamic development of regionalism.

## **Editorial Review**

### Review

'This excellent volume is a valuable source of new knowledge of 'old' regionalism and an inspiring guide for further research. It succeeds in clarifying convincingly different aspects of the dynamics between ROs and their member states. It carefully avoids two typical pitfalls; a normative bias (regionalism as intrinsically good or bad) and Euro-centrism. It shows the usefulness of theoretical pluralism and the fruitfulness of sound comparative work, explaining similarities and differences in such widely diverging contexts as Eurasia, the Arab world, Africa, Asia and the Americas. It raises questions which will guide future research on old and new regionalism alike.' Anna van der Vleuten, Radboud University Nijmegen, The Netherlands

'This very well researched volume is a valuable contribution to the study of regionalism and regional organizations. It covers most relevant contemporary regional organizations through four central aspects: their genesis and growth, institutional design, member-states behavior and effects of member-states. The analysis includes economic, cultural, political and institutional characteristics of organizations in an analytical framework that allows for great complexity. The volume succeeds in building a much needed bridge between European Integration studies and the New Regionalism Approach, and in making a case for the importance of regional organizations in the emerging systems of global governance.' Andrea Ribeiro Hoffmann, Universität Erfurt, Germany

'A theoretically-eclectic volume resulting from dedicated workshops on the topic, it offers a common framework for understanding variation in the role of regional organizations across the world. The editors should be congratulated for gathering a new generation of scholars bound to expand the analytical and empirical horizons in the study of regionalism.' Etel Solingen, University of California, Irvine, USA

'... readers interested in regionalism will find the volume helpful and inspiring. Roads to Regionalism paves the way for future regionalism studies, pioneers by contributing to the field with the analysis and presentation of multiplicity and complexity of ROs worldwide, and reassures the importance of three different aspects of ROs - genesis, design and multi-sided effects.' Politics and Governance
