Cellulose-Based Graft Copolymers: Structure and Chemistry From CRC Press

Cellulose-Based Graft Copolymers: Structure and Chemistry discusses the synthesis, characterization, and properties of multifunctional cellulose-based graft copolymers. Presenting the contributions of accomplished experts in the field of natural cellulosic polymers, this authoritative text:

- Offers an overview of cutting-edge technical accomplishments in natural cellulose-based graft polymers
- Addresses a separate biomaterial in each chapter, exploring composition as well as graft copolymerization chemistry
- Covers fundamentals and applications including toxic ion removal, biomedical engineering, biofuels, micro/nano composites, papermaking, building materials, and defense

Cellulose-Based Graft Copolymers: Structure and Chemistry tackles several critical issues and provides suggestions for future work, supplying deeper insight into the state of the art of advanced cellulose-based graft copolymers.

Editorial Review

Review

"... a good overview of the past and current pathways for cellulose-based graft copolymers."

?Dr. Minh Tan Ton-That, National Research Council Canada, Boucherville, Québec

"... a very important and comprehensive piece of work. ... a worthwhile read."

?Dr. Dilip Depan, University of Louisiana at Lafayette, USA

"With its distinguished editor and team of international contributors, this book will be an invaluable reference for academics, scientists, and researchers pertaining to the polymer field."

?Professor Tarun K. Maji, Tezpur University, India

"... provides valuable information on the latest developments of cellulose-based graft copolymers. ... Every polymer scientist must read this book."

?Professor Mohd Sapuan Salit, Universiti Putra Malaysia, Serdang

"Each chapter is written with teaching skills and contains recent scientific information which will be useful ... in different domains, such as polymer chemistry, biopolymers, plastic technology, material science, chemical engineering, forestry, agriculture, cellulose, green composites, and biotechnology."

?Dr. Silvia Ioan, "Petru Poni" Institute of Macromolecular Chemistry, Iasi, Romania

"An interesting book for natural polymers that will be a good read for postgraduate researchers and material engineers and scientists alike searching for in-depth understanding of grafted cellulose. The book is detailed in grafting process and provides detailed examples of potential applications in environmental, medical and a selection of engineering sectors. A must have if you are into medical and health biomaterials."

?James Njuguna, Robert Gordon University, Aberdeen

About the Author

Vijay Kumar Thakur is currently a staff scientist in the School of Mechanical and Materials Engineering at Washington State University, Pullman, USA. His former appointments include a research scientist in Temasek Laboratories at Nanyang Technological University, Singapore, and a visiting research fellow in the Department of Chemical and Materials Engineering at Lunghwa University of Science and Technology, Taiwan. He completed his postdoctorate in materials science at Iowa State University, Ames, USA, and his Ph.D in polymer science at the National Institute of Technology, Hamirpur, India. In addition to being widely published, Dr. Thakur is an editorial board member of numerous international journals, guest editor of the *International Journal of Polymer Science* and *Journal of Chemistry*, and member of several scientific bodies around the world.

From reader reviews:

Bertha Costa:

Why don't make it to be your habit? Right now, try to prepare your time to do the important take action, like looking for your favorite book and reading a guide. Beside you can solve your long lasting problem; you can add your knowledge by the book entitled Cellulose-Based Graft Copolymers: Structure and Chemistry. Try to the actual book Cellulose-Based Graft Copolymers: Structure and Chemistry as your good friend. It means that it can to become your friend when you really feel alone and beside regarding course make you smarter than ever before. Yeah, it is very fortunated for you. The book makes you considerably more confidence because you can know every little thing by the book. So , let me make new experience and also knowledge with this book.

Velma Stuart:

Reading a e-book can be one of a lot of pastime that everyone in the world loves. Do you like reading book so. There are a lot of reasons why people fantastic. First reading a book will give you a lot of new facts. When you read a e-book you will get new information since book is one of a number of ways to share the information or perhaps their idea. Second, looking at a book will make an individual more imaginative. When you reading a book especially fictional works book the author will bring you to imagine the story how the personas do it anything. Third, you can share your knowledge to other people. When you read this Cellulose-Based Graft Copolymers: Structure and Chemistry, it is possible to tells your family, friends as well as soon about yours e-book. Your knowledge can inspire others, make them reading a publication.

Odis Hillyard:

Spent a free time and energy to be fun activity to complete! A lot of people spent their free time with their family, or their particular friends. Usually they accomplishing activity like watching television, likely to beach, or picnic in the park. They actually doing same thing every week. Do you feel it? Do you want to something different to fill your personal free time/ holiday? Could be reading a book could be option to fill your free of charge time/ holiday. The first thing that you will ask may be what kinds of book that you should read. If you want to attempt look for book, may be the reserve untitled Cellulose-Based Graft Copolymers: Structure and Chemistry can be fine book to read. May be it can be best activity to you.

Mary Kidd:

A lot of reserve has printed but it differs. You can get it by net on social media. You can choose the most effective book for you, science, comedian, novel, or whatever by searching from it. It is known as of book Cellulose-Based Graft Copolymers: Structure and Chemistry. Contain your knowledge by it. Without making the printed book, it might add your knowledge and make a person happier to read. It is most essential that, you must aware about guide. It can bring you from one place to other place.
