Adaptive Thermal Comfort: Foundations and Analysis By Michael Humphreys, Fergus Nicol, Susan Roaf

There has been widespread dissatisfaction with accepted models for predicting the conditions that people will find thermally comfortable in buildings. These models require knowledge about clothing and activity, but can give little guidance on how to quantify them in any future situation. This has forced designers to make assumptions about people's future behaviour based on very little information and, as a result, encouraged static design indoor temperatures.

This book is the second in a three volume set covering all aspects of Adaptive Thermal Comfort. The first part narrates the development of the adaptive approach to thermal comfort from its early beginnings in the 1960s. It discusses recent work in the field and suggests ways in which it can be developed and modelled. Such models can be used to set dynamic, interactive standards for thermal comfort which will help overcome the problems inherited from the past. The second part of the volume engages with the practical and theoretical problems encountered in field studies and in their statistical analysis, providing guidance towards their resolution, so that valid conclusions may be drawn from such studies.

Editorial Review

About the Author

Michael Humphreys is known for his pioneering work on the adaptive approach to comfort. He was Head of Human Factors at the Building Research Establishment, and has been a Research Professor at Oxford Brookes University. His scientific interests are the methodology of field studies of environmental comfort, the structure and statistical modelling of human adaptive behaviour, and the interactions between the several aspects of the indoor environment.

Fergus Nicol has led a number of important research projects on comfort, which have influenced thinking internationally. He has authored numerous journal articles and other publications including guidance on comfort and overheating. Fergus convenes the Network for Comfort and Energy Use in Buildings and organises their regular international Windsor Conferences.

Susan Roaf did her PhD on comfort and the windcatchers of Yazd, and after a decade working with Nicol and Humphreys at the Oxford Thermal Comfort Unit, she is now Professor of Architectural Engineering at Heriot Watt University in Edinburgh. She is a teacher, researcher, designer and author and editor of 21 books including *Ecohouse: A Design Guide* and *Adapting Buildings and Cities for Climate Change*.

Users Review

From reader reviews:

Helen Woodyard:

In this 21st one hundred year, people become competitive in every single way. By being competitive currently, people have do something to make them survives, being in the middle of the crowded place and notice through surrounding. One thing that oftentimes many people have underestimated that for a while is reading. That's why, by reading a book your ability to survive enhance then having chance to remain than other is high. For you personally who want to start reading a new book, we give you this Adaptive Thermal Comfort: Foundations and Analysis book as basic and daily reading e-book. Why, because this book is greater than just a book.

Lucille Davis:

Reading a reserve tends to be new life style on this era globalization. With studying you can get a lot of information that will give you benefit in your life. Using book everyone in this world can share their idea. Guides can also inspire a lot of people. Many author can inspire their own reader with their story or perhaps their experience. Not only situation that share in the guides. But also they write about the ability about something that you need instance. How to get the good score toefl, or how to teach children, there are many kinds of book that you can get now. The authors in this world always try to improve their proficiency in writing, they also doing some research before they write for their book. One of them is this Adaptive

Thermal Comfort: Foundations and Analysis.

Leslie Woodson:

Would you one of the book lovers? If yes, do you ever feeling doubt when you find yourself in the book store? Make an effort to pick one book that you find out the inside because don't evaluate book by its handle may doesn't work the following is difficult job because you are frightened that the inside maybe not as fantastic as in the outside seem likes. Maybe you answer may be Adaptive Thermal Comfort: Foundations and Analysis why because the excellent cover that make you consider concerning the content will not disappoint you. The inside or content is definitely fantastic as the outside or maybe cover. Your reading sixth sense will directly show you to pick up this book.

Georgia Cunningham:

As a college student exactly feel bored for you to reading. If their teacher expected them to go to the library as well as to make summary for some book, they are complained. Just very little students that has reading's internal or real their hobby. They just do what the trainer want, like asked to the library. They go to generally there but nothing reading very seriously. Any students feel that studying is not important, boring and also can't see colorful pictures on there. Yeah, it is to get complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this Adaptive Thermal Comfort: Foundations and Analysis can make you feel more interested to read.
